

Why Grandrib 3 Plus?

The Only “TOTAL PACKAGE” Roofing & Siding Panel – **NO COMPROMISES**

1) Panel Strength

- a. Full 29 gauge thickness – the only panel in our market that can make that claim ALL THE TIME. Others are as much as 5% to 10% thinner.
- b. Structural quality, full hard steel. Foot traffic and dent (hail) resistant. Grandrib 3 Plus STEEL is the strongest and hardest available. Others use foreign or open market steel with no guaranteed strength or hardness – inconsistent and weaker material. There is no “just as good as” structural quality steel.

2) Corrosion Resistance

- a. A full coating, BOTH SIDES, of old-time heavy duty galvanizing, averaging in excess of 1.0 oz. per square foot of panel, is applied. In addition, unique to Grandrib 3 Plus is a corrosion resistant, zinc enhanced pre-treatment, and a separate sealer coat – all before the paint primer is applied. No other manufacturer can come close to this level of corrosion protection.

3) Paint System

- a. Industry-leading, high-performance Enduracote™ paint system. Why manufacture a thicker, stronger, and industry best corrosion-resistant panel and not finish it with the best, hardest, and most scratch-resistant paint system available? Grandrib 3 Plus uses the BEST of the Valspar paint systems to insure lifetime paint film integrity, the longest fade and chalk warranties available, and even more corrosion protection. Check and compare the warranties – no other panel comes close. No compromises like those made by other manufacturers.

4) Manufacturing Quality

- a. Fabral’s manufacturing facilities are state of the art. And, the average experience of Fabral’s Grandrib 3 Plus roll-former operators is in excess of 25 years EACH! Not less than 25 years total like most competitors. Grandrib3 Plus panels will look sharp, will cover 36”, and will be square – each and every panel. The best equipment and the best people make Grandrib 3 Plus the easiest and fastest to install, which is better for the installer and the owner.

Compare the “TOTAL PACKAGE” of Gradrib 3 Plus with any other panel on the market. Where others make compromises in a variety of “hidden” areas, Fabral and Grandrib 3 Plus make no compromises.

Top to Bottom

- **NO** cheaper thin steel
- **NO** cheaper, weaker commercial quality steel
- **NO** cheaper, thinner galvanized or alternative galvalume coating
- **NO** cheaper paint finishes
- And, **NO** corners cut in manufacturing

Finally, check our pricing – you will be surprised by how competitive Grandrib 3 Plus is.
